Venture software remembers companies.
Aethria remembers decisions.

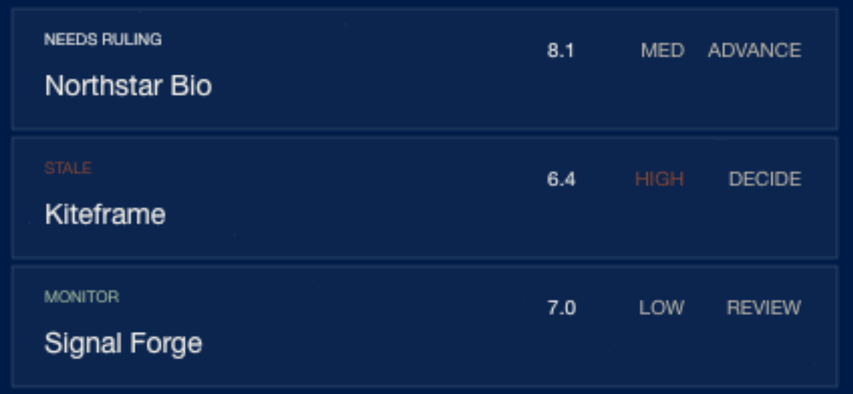

Solo GPs do not need another place to store deals. They need a system that forces decisions.

BEFORE

- SPREADSHEET ROWS
- NOTION NOTES
- EMAIL THREADS
- WHATSAPP CONTEXT
- MEMORY

Interesting companies remain unresolved.
Pass decisions disappear.
Risks stay informal.

AFTER

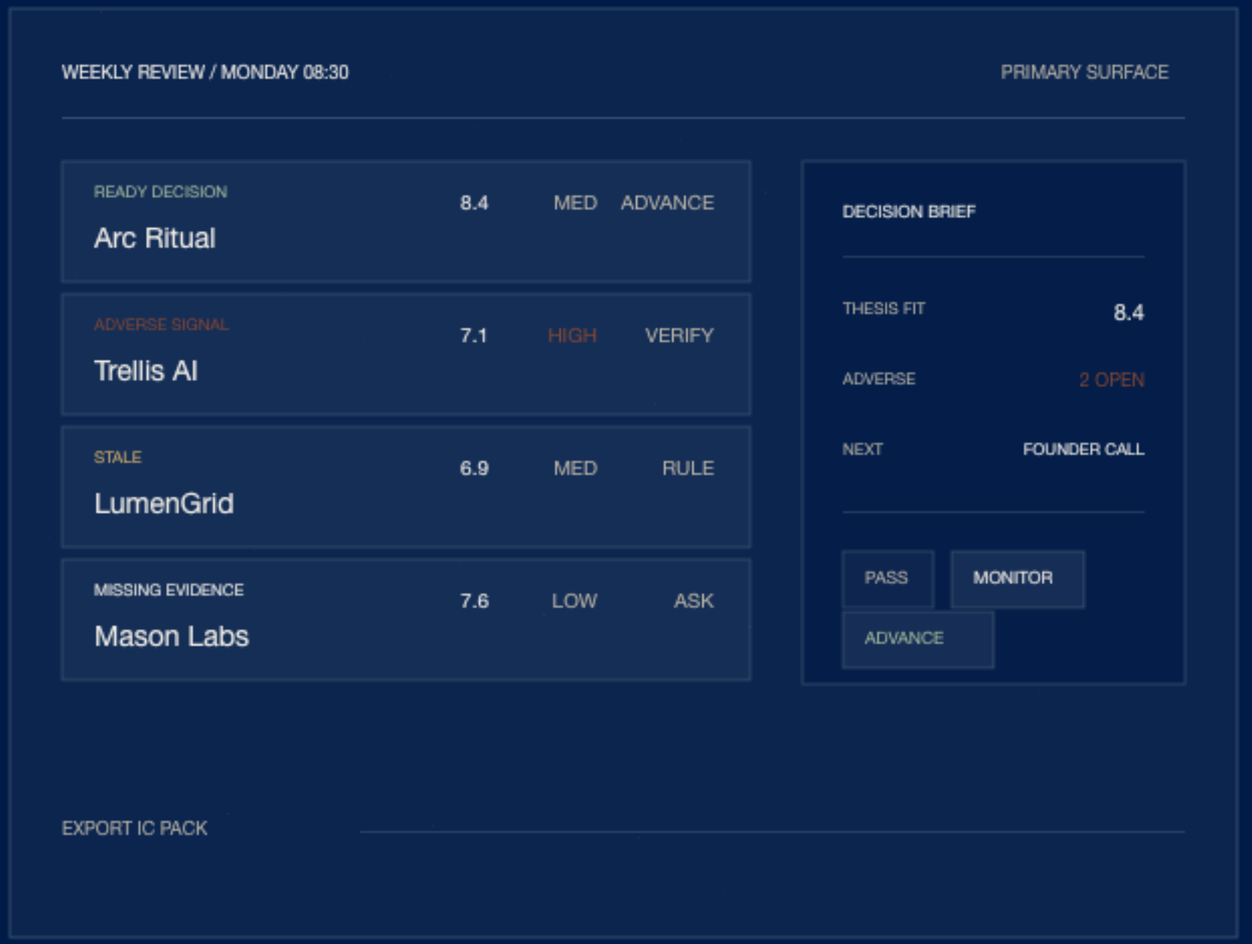

STATE / RISK / NEXT ACTION / RULING / PRECEDENT

The weekly decision reset.

Every company must move toward a ruling.

Aethria exists so no deal stays in limbo indefinitely.

Built for the first institutional process.

Start where process does not already exist.

SOLO GP OR TWO-PERSON FUND	FUND I / FUND II
$10M-$25M AUM	SEED / PRE-SEED
NO FULL-TIME ANALYST	NO FORMAL IC

These funds need institutional discipline before institutional headcount.

Start with historical decisions.

Trust is earned on old decisions before live workflow.

5	5	5	5
INVESTMENTS	CORRECT PASSES	MISSED OPPORTUNITIES	AMBIGUOUS CASES

20-DEAL INPUT

SELF-AUDIT, NOT SOURCING

DECISION LEDGER

Q1 2025	Arc Ritual	INVEST	8.4
Q2 2025	Kiteframe	PASS	6.1
Q3 2025	LumenGrid	MONITOR	7.2
Q4 2025	Mason Labs	PASS	5.9

AETHRIA RETURNS

decision ledger / risk postmortems / scoring consistency / precedent mapping / delayed conviction examples

Queue -> risk -> action -> ruling -> memory

The product is organized around decisions, not notes.

01
QUEUE
which companies need judgment

02
RISK
what could break the case

03
ACTION
what evidence is missing

04
RULING
pass / monitor / advance

05
MEMORY
what precedent remains

Aethria separates weak companies from unresolved diligence.

THESIS ALIGNMENT / STRUCTURED SCORING / ADVERSE REGISTER / MISSING EVIDENCE / PRECEDENT LINKAGE

CRMs manage relationships. Aethria manages conviction.

The CRM tracks who the GP knows. Aethria tracks what the fund decided and why.

TRADITIONAL CRM

- CONTACTS
- STAGES
- ACTIVITIES
- REMINDERS

AETHRIA DECISION ARTIFACT

THESIS FIT	seed infra mandate
RISKS	distribution concentration
RATIONALE	advance pending proof
PRECEDENT	similar to Q2 pass
EVIDENCE	3 sources attached
STATE	monitor

The moat begins as habit.

If Aethria becomes the weekly decision surface, fund memory compounds.

SWITCHING COST ONLY MATTERS IF THE PRODUCT IS OPENED WEEKLY

Built product. Now prove weekly usage.

The next risk is behavioral, not technical.

BUILT

decision queue / mandate-gated review / structured scoring / adverse register / conviction state / IC export workflow / human ruling system

NEXT 60 DAYS

200	FUND TARGET MAP
50	FIRST CONTACTS
15	CALLS
5	HISTORICAL PILOTS
1	LIVE WEEKLY WORKFLOW

Success: Aethria becomes the primary weekly review surface for at least one fund.

Built by a technical founder focused on decision systems.

The product exists. Now the workflow must be hardened with real funds.

BACKGROUND

DCU engineering
EY technology consulting
Built Aethria end-to-end as a solo founder

WHAT IS TRUE

Not a career VC
Not trying to replace investor judgment
Starts with postmortems because trust must be earned operationally

CURRENT JOB

Convert product architecture into weekly behavior with solo and two-person seed funds

Applying to a16z Speedrun.

Use Speedrun to convert a built system into a repeatable weekly workflow for emerging managers.

01	5 historical-postmortem pilots
02	1 active weekly fund workflow
03	10 paying emerging-manager customers or a validated ICP evolution

LONG-TERM VISION

Aethria becomes the operating memory layer for early-stage investing.

Aethria

Venture has systems for sourcing.
Aethria is building the system for decisions.
